GENERAL INFORMATION:
APPLICANT: Kalos, Michael D.
APPLICANT: Retter, Marc M.
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE THERAPY
TITLE OF INVENTION: AND DIAGNOSIS OF LUNG CANCER
FILE REFERENCE: 210121.455015
CURRENT APPLICATION NUMBER: US/09/850,716A

Nuclectides representing cancer-associated genes, used to develop products for the diagnosis, monitoring and treatment of cancers.

Claim 55; Page 40; 44pp; English.

The present sequence represents a cancer associated antigen gene designated KOC-2. The specification also describes a cancer associated antigen designated CC-2. The CT7 polymucleotide was isolated from SK-MEL-37 melanoma cells. The polymeptide has some homology with MAGE-10, limited to about 210 carboxy terminal amino acids. The amino terminal of the protein has a repetitive pattern, with repeats rich in serine, proline, glutamine and leucine, and an almost invariable core of the peptide given in AAX43877. The CT7 polymeptide can be processed to peptides which provoke lysis by cytolytic T cells. The polymucleotides and polymeptides can be used for treating a cancerous condition and screening for or diagnosing cancerous conditions. The cancer associated antigens can be used as an immunogenic or vaccine composition with an adjuvant, e.g. a cytokine, a saponin, or granulocyte macrophage-colony

Nucleotides representing cancer-associated genes, used to develo products for the diagnosis, monitoring and treatment of cancers. Claim 55; Page 42; 44pp; English LUDWIG INST CANCER RES WPI; 2000-013284/01 Gure A, Chen Y, 

The present sequence represents an alternative form of a cancer associated antigen gene designated KOC-2. The specification also describes a denoter associated antigen designated CT7. The CT7 polynucleotide was isolated from SX-WEL-37 melanoma cells. The CT7 polynucleotide was some homology with MAGE-10, limited to about 210 carboxy terminal amino acids. The amino terminal of the protein has a repetitive pattern, with repeats fich in serine, proline, glutamine and leucine, and an almost invariable core of the peptide given in AAY43877. The CT7 polypeptide can be processed to peptides which provoke lysis by evtolytic T cells. The polynucleotides and polypeptides can be used for treating a Cancerous condition and screening for or diagnosing cancerous conditions. The cancer associated antigens can be used as an immunogenic or vaccine composition with an adjuvant, e.g. a cytokine, a saponin, or granulocyte macrophage-colony stimulating factor (GM-CSF)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length cDnes were obtained by construction of full length enrished cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length muman cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAAGCCATCAGTGTGCACTCCACCCCTGAGGGCTGCTCCTCCGCTTGTAAGATGATCTTG 418

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      89
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence encodes a murine c-myc coding region determinant binding protein (CRD-BP). The presence or absence of a tumor can be determined by determining the levels of CRD-BP present in the suspect tissue, where the CRD-BP shields c-myc RNA from endonucleolytic attack and so prolongs its half-life. The methods are used for diagnosing presence or absence of a tumor in a human, especially breast, colon and pancreatic cancer. They are also used to inhibit cancer cell growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Diagnosing presence or absence of a tumor in a human by examining c-myc coding region determinant-binding protein.
                                                                                                                                                                                                          region determinant binding protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CCTACATACCTGATGAGCAGATAACACAAGGTCCTGAGAATGGGCGTCGTGGAGGCTTTG

and New nucleic acid molecules encoding 461 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions used as food additives or preservatives. Claim 1; SEQ ID NO 327; 980pp; English

SM

The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a plathological condition. Antibodies to the proteins can also be used in alloyating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme linked immunosorbant assays (ELISA). Disorders which are diagnosed or treated include autoimmune

1375

diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. arreadisc arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia, angiogenesis, nervous system disorders e.g. Arbieimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection, and many other disorders listed in the specification. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sumburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to respente tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, mirerals, cofactors and other nutritional components. The present sequence encodes a novel secreted protein of the invention. Note: The sequence data for this patent did not form part of the printed 1074 1254 1314 1134 ACCACCCGAAACACCTGACTCCAAAGTTCGTATGGTTATCATCACTGGACCGCCAGAGGC 1014 CATTGGCAAAGGTGGAAAAACGGTGAACGAGTTGCAGAATTTGACGGGCAGCTGAGGTGGT 1194 GCAGCATCAGAAGGGACAGAGTAACCAGGCCCAAGGCACGGAGGAAGTGACCAGCCCCTCC 1374 CIGICCCTINGAGICCAGGACAACAAGGGGCAGAAAICGAGAGIGIGCICTCCCCGGCAG 1434 617 677 797 437 497 9 AATAATGAAGAAGTTCGGGAGGCCTATGAGAATGATGTGGCTGCCATGAGC-----TC 714 137 774 reaccidarecereacerdaecreciderariamentreceaecricareages 197 834 257 894 TCCCGAGCAGAGATGGTGCAGGTGTTTATCCCGCCCAGGCAGTGGGCGCCATCATCGG 317 CAAGAAGGGGAGCACATCAAACAGCTCTCCCGGTTTTGCCAGCGCCTCCATCAAGATTGC 954 CAAGAAGGGCAGCACATCAAACAGCTCTCCCGGTTTGCCAGCGCCTCCATCAAGATTGC 377 TITCIAIGCCAGICAGAIGGCICAACGGAAGAICCGAGACAICCIGGCCAAGGITAAGCA 737 77 AGTCCCGCCGCCTCCCAGCAGCGTTACTGGGGCTCCTCCTATAGCTCCTTTATGCAGGC 378 ACCACCCGAAACACCCTGACTCCAAAGTTCGTATGGTTATCATCACTGGACCGCCAGAGGC ccaarricaaggcricagggaaggaarcrarggcaaacrcaaggaggaagricrrrggricc AGTACCAAGAGACCAGACCCCTGATGAGAACGACCAGGTCATCGTGAAAATCATCGGACA AGTCCCGCCGCCTCCCAGCAGCGTTACTGGGGCTGCTCCCTATAGGTCCTTTATGCAGGC TCCCGAGCAGGAGATGGTGCAGGTGTTTATCCCCGCCCAGGCAGTGGGCGCCCATCATCGG CCAATTCAAGGCTCAGGGAAGAATCTATGGCAAACTCAAGGAGGAGAACTTCTTTGGTCC AGTACCAAGAGCCCAGACCCCTGATGAGAACGACCAGGTCATCGTGAAATCATCGGACA TITCIATGCCAGTCAGATGGCTCAACGGAAGATCCGAGACATCCTGGCCCAGGTTAAGCA GCAGCATCAGAAGGGACAGAGTAACCAGGCCCAGGCACGGAGGAAGTGACCAGCCCCTCC CGCTGAGAGGACCATCACTGTGAAGGGGGCCATCGAGAATTGTTGCAGGGCCGAGCAGGA CAAGGAGGAAGTGAAGCTGGAGACCCACATACGTGTGCCAGCATCAGCAGCTGGCCGGGT 601 CCCTGAGAGGACCATCACTGTGAAGGGGGCCATCGAGAATTGTTGCAGGGCCGAGCAGGA TCACCTGATCCCTGGCCTGAACCTGCTGCTGTAGGTCTTTTCCCCAGCTTCATCCAGCGC Gaps Score 1085.4; DB 4; Length 1182; Pred. The invention relates to human novel polypeptides and their associated polynucleotides. The polypeptides and polynucleotides are useful in gene therapy for treating, inhibiting or preventing neural disorders, immune system disorders (e.g. vstemic lupus erythematosus, rheumatodid arthritis and multiple solerosis), muscular disorders, respiratory diseases (e.g. nasal vestibulitis, nasal polyps and sinusitis), reproductive disorders, gastrointestinal disorders, Dumonary disorders, cardiovascular disorders, (e.g. congenital heart defects, Ebstein's anomaly and hypoplastic left heart syndrome), renal disorders (e.g. acute kidney failure and end-stage renal disease), hyperproliferative disorders (e.g. Hodgkin's disease and appendicitis), allergic reactions and conditions (e.g. asthma), blood related disorders (e.g. thrombosis, atheroscierosis and myocardial infarction) and cancerous diseases. The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to encoded secreted proteins. The nucleic acids and proteins are used to concern the condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a also be used in allowating symptoms associated with the disorders and in diagnostic manunoassays e.g. radioimmunoassays or enzyme linked immunosorbant assays (ELISA). Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. cardiac diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. cardiac carest, osrborvascular disorders e.g. cardiac carest, osrborvascular disorders e.g. Carebral ischaemia, analycenesis, nervous system disorders e.g. Alzhimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection. Company other disorders listed in the specification. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used to as used companitives, fat content, libid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional components. The present capabilities, fat content printional components. The present components of the printed sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New nucleic acid molecules encoding 461 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        62.6%; Score 1069.8; DB 4; Length 1129; 98.7%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to human novel polypeptides and their associated bolymuclectides. The polypeptides and polymuclectides are useful in gene therapy for treating, inhibiting or preventing neural disorders, immune system disorders (e.g. systemic lupus erythematosus, rheumatoid arthritis and multiple sclerosis), muscular disorders, respiratory diseases (e.g. gastrointestinal disorders, pulmonary disorders, reproductive disorders, gastrointestinal disorders, bilmonary disorders, cardiovascular disorders, (e.g. congenital heart defects, Ebstein's anomaly and hypoplastic left heart syndrome), renal disorders (e.g. acute kidney failure and end-stager renal disease), hyperproliferative disorders (e.g. Hodgkin's disease and appendicitis), allergic reactions and conditions (e.g. asthma), blood related disorders (e.g. thrombosis, atherosclerosis and myocardial infarction) and cancerous diseases.
